

Scout Trucks

Rules

While there are a few rules the objective here is to have fun. The overall length cannot exceed 44.5 cm. The over all width cannot exceed 8.5 cm. The overall height cannot exceed 11.5 cm. You cannot alter the length of the axles in any way (otherwise the truck will not fit on the track). The overall weight cannot exceed 800gms (no exceptions). In addition, the truck must have all the wheels that come with the kit installed and they all have to contact the track. The truck must have a cab and trailer and the cab and trailer should pivot freely. Other than that, use your imagination and have fun.

These rules must be followed to ensure the trucks will fit on the track and will go through the starting gate.

Unlike Kub Kars it is OK to use decals put things on the truck, (cars, logs etc) as long as it conforms to these dimensions.

Please call if you have any questions.
